

## **Renewal of EC Certificates After Brexit**

On 15 January 2021, the Turkish Medicines and Medical Devices Agency published an [announcement](#) (Turkish language) on the deactivation of Product Tracking System registrations of notified bodies located in the UK following the end of the UK-EU transition period. The registrations were deactivated on the date of the publication of the announcement, although affected medical device companies will have a 60-day period to update the system with valid EC certificates (issued by the EU notified bodies). After 60 days, medical devices that do not have a valid EC certificate will be rejected by the system.

During the updating procedure, if it is determined that the EU notified body numbers differ between documents that are submitted for a single device, the record application of the device will be rejected.
